

The Cryogenic ISO Tank Network

Bofort offers rental and leasing services for cryogenic ISO tank container equipment to specialized gas transportation companies, cryogenic gas manufacturers, on- and offshore nitrogen service companies, and other end-users.

We build to specifications, offering maximum flexibility to our clients as possible. All our equipment is suitable to carry and store **liquid nitrogen (LIN), liquid oxygen (LOX) and liquid argon (LAR)**.

Whilst recognizing the need to have dedicated equipment for specific trades and products, most of our equipment is also suitable to carry and store **carbon dioxide (CO²), nitrous oxide (N²O), ethylene, ethane and liquefied natural gas (LNG)**.

Advantages:

- **Safety:** tanks are built to highest international safety standards and comply with all international regulations; they are the safest means to transport specific quantities of cryogenic gases in bulk.
- **Intermodal:** suitable to be carried using all modes of transportation: truck, train, barge, ship
- **Ecological:** given their suitability for intermodal transportation, distribution of gases in bulk over medium and long distances can be conducted by environmentally-friendly means, such as rail, barge and short-sea.
- **Intermediate storage:** with holding times of over 100 days (depending on the type of gas and climate conditions), tank containers offer flexibility to transport and store gases in the supply-chain as 'moving pipelines', mobile buffer tanks for large industrial cleaning and maintenance jobs, pipe purging, etc.
- **Economic:** as a result of the features listed above, cryogenic tank containers often result in optimization of the supply chain and monetary savings.

Rental options

- Cryogenic ISO tank container rental- **short-term rental:** Bofort keeps a stock of tanks at designated depots to cover short-term needs in the market. Rental periods: 1 week to 6 months.
- Cryogenic ISO tank container - **operating leasing:** medium and long-term operating lease structures are offered to those clients looking for operational and financial flexibility.
- Cryogenic ISO tank container - **finance** : tailor-made finance lease structures are offered on selected cryogenic tank equipment, with a view to accommodating clients' specific capital structure needs and requirements.
- Our large fleet consists of **10ft, 20ft** and **40ft** containers

Consulting

- Cryogenic handling equipment rental and finance: in conjunction with its cryogenic tank container rental and leasing services Bofort advises in, and arranges lease structures for, specialist cryogenic equipment such as vaporizers and pumps

Fleet Management

- Bofort offers its services for the management of your tank container fleet and can act as your agent or representative in the acquisition and disposal of your tank containers.
